PROFESSIONAL EXPERIENCES

Project Name: Super Shop Management System (University Project)

Description: There are two modules such as Admin and Employee. Admin can do everything such as add product, update product, employee, transaction, report etc. Employee can only sell and bill generate and manage inventory. I use database first in my project and also know code first and model first.

Tools and Technologies used: C#, ASP.NET MVC 5, AJAX, JSON, LINQ, MS SQL Server, Search Algorithm and Sort Algorithm etc.

Project Name: University Course and Result Management System

Description: Build the system which are including login panel, students & teacher's data save, registration, course assign to teacher, view course statics with specific department, allocate classrooms, enroll in a course, get result in pdf file etc.

Tools and Technologies used: C#, ASP.NET MVC 5, AJAX, JSON, LINQ, MS SQL Server etc.

Project Name: Diagnostic Center Bill Management System.

Description: A webForm app to replicate the Bill management in a Diagnostic Center. Its managing patient, test type, test request entry, payment, test wise report, type wise report and see unpaid bill report etc. I use layer architecture in my project.

Tools and Technologies used: C#, JAVASCRIPT, ASP.NET, MS SQL SERVER etc.

Project Name: Mess Account Management System

Description: The software makes basically for our mess and successfully running for the last five months. All calculation in our mess control by the software such as house rent, net rent, meal amount and total cost etc. we can get all report such as per meal amount, per person amount who have to give money to mess or who will get money from the mess. We can also see per day meal rate and update meal.

Tools and Technologies used: C#, JAVASCRIPT, ASP.NET MVC 5, MS SQL SERVER, AJAX, JSON, ADO.NET etc.
